

Accessing Sri Chaitanya Saraswat Math's Diacritic Fonts
(for Macintosh computer platforms)

(Page 1)

This document is set up for A4 paper. If you wish to print it on 'US Legal', set your 'Page Setup' printing option to print at 94% of actual size.

NOTES regarding the diacritic fonts:

Recognised as letters by the inherent Macintosh software & by the 'Microsoft Word' User Dictionaries. So double clicking on words does pick up the whole word, clicking while holding down the command key picks up the whole sentence, etc., and diacritic words can be stored in your own dictionary.

The diacritic key-strokes are accessed by loading the accompanying QuicKeys Universal Set (Open your QuicKeys programme from your apple menu, then open the enclosed QuicKeys set, select all, copy, then paste them into your own Universal Keys set)

Keystrokes may vary according to the particular Keyboard Layout you are using (see the Keyboard control panel). The following keystrokes apply to the U.S. Keyboard Layout we use in the Math.

Diacritic Fonts, all using these keystrokes:

BodoScsm	adapted from 'Bodini'
Centenary (earlier version: 'NewServ')	adapted from 'Times'
CouriDiac (earlier version: 'Candana')	adapted from 'Courier'
Garunda	adapted from 'Garamond'
GoudHDia	adapted from 'GoudyHandTool'
Haven	adapted from 'Helvetica'
Koladwip	adapted from 'Palatino'
